The diagrams use standardized symbols to represent components such as pumps, valves, cylinders, and lines. Familiarity with these symbols is essential for accurate interpretation.

Key aspects of hydraulic diagrams include:

- Flow paths: Indicated by arrows showing fluid movement.
- Pressure lines: Usually depicted with solid or dashed lines.
- Return lines: Carry fluid back to the reservoir.
- Pressure relief valves: Protect system from overpressure.

Detailed Breakdown of the 1979 John Deere Backhoe Hydraulic Components

Hydraulic Pump

The pump, often a gear or piston type in 1979 models, is driven by the engine. It supplies pressurized fluid to the entire system. The hydraulic diagrams illustrate:

- The suction side connected to the reservoir.
- The pressure side delivering fluid to control valves.
- The location of relief valves for safety.

Common considerations:

- Pump pressure typically ranges between 2000-3000 PSI.
- Wear or damage can reduce flow, causing sluggish operation.

Control Valves

Control valves are the control center, managing fluid flow based on operator input:

- Joystick/Lever Valves: Manual controls that route fluid to cylinders.
- Detent or spool valves: Determine the movement direction and speed.

- Flow control valves: Modulate the rate at which cylinders extend or retract.

In the diagrams, control valves are represented with specific symbols, and their placement indicates how they interconnect with cylinders.

Hydraulic Cylinders

The backhoe's operational arms and bucket are powered by hydraulic cylinders:

- Boom Cylinder: Raises and lowers the main arm.
- Stick Cylinder: Extends or retracts the boom.
- Swing Cylinder: Rotates the entire backhoe attachment.
- Bucket Cylinder: Opens and closes the bucket.

Diagrams show how these cylinders connect to control valves via hydraulic lines, with ports labeled for clarity.

Hydraulic Reservoir and Filters

The reservoir stores hydraulic fluid and allows for thermal expansion and fluid settling. Filters are placed along the return line to remove contaminants, ensuring system longevity.

Diagram insights:

- The reservoir often includes a breather cap.
- Filters are marked with their specific micron ratings.

Hydraulic Circuit Operation in 1979 John Deere Backhoe

Understanding the operation of the hydraulic system involves tracing the flow during typical tasks:

- Starting the System

The engine drives the hydraulic pump, which draws fluid from the reservoir.

- Activating the Control Valve

Operator moves the control lever, opening a spool valve that routes pressurized fluid to the desired cylinder.

- Cylinder Movement

Hydraulic fluid pushes the piston within the cylinder, causing movement (e.g., lifting the boom).

- Returning Fluid

Fluid from the cylinder returns via the other port, flowing back through control valves to the reservoir.

Flow sequence example for boom lift:

- Operator pushes the boom lift control lever.
- The control valve directs pressurized fluid to the boom cylinder's base port.
- The piston extends, raising the boom.
- Simultaneously, fluid in the opposite side of the cylinder is vented back to the reservoir.

Common Hydraulic Issues and Diagnostic Tips

Troubleshooting the hydraulic system requires familiarity with typical failure points, many of which can be identified through the hydraulic diagrams.

Common Problems:

- Loss of Power or Slow Operation:

Could indicate pump wear, clogged filters, or low hydraulic fluid levels.

- Hydraulic Leaks:

Visual inspection of lines, fittings, and cylinders; leakage indicates worn seals or damaged hoses.

- Cylinder Drift:

Cylinders slowly move under no control; suggests worn seals or inadequate control valve function.

- Erratic or Unresponsive Controls:

Possible contamination in the control valves or debris blocking flow passages.

Diagnostic steps:

- Check hydraulic fluid level and condition.
- Inspect for visible leaks or damaged hoses.
- Test pressure at various points in the circuit using a hydraulic gauge.
- Examine control valves for proper operation.
- Consult the hydraulic diagram to trace flow paths and isolate issues.
